Floating Steps
& Structural Glass

At the cutting edge of contemporary design, floating steps make for a truly striking focal point.

The use of structural glass for support results in staircases that blend effortlessly into any space.

With their minimalist aesthetic, floating steps excel in large open halls where light can shine through for maximum effect.

They also open up more limited stairwells to make the most of existing light sources.

Extended tread caps are a great way to add some extra style, concealing otherwise visible fixings.

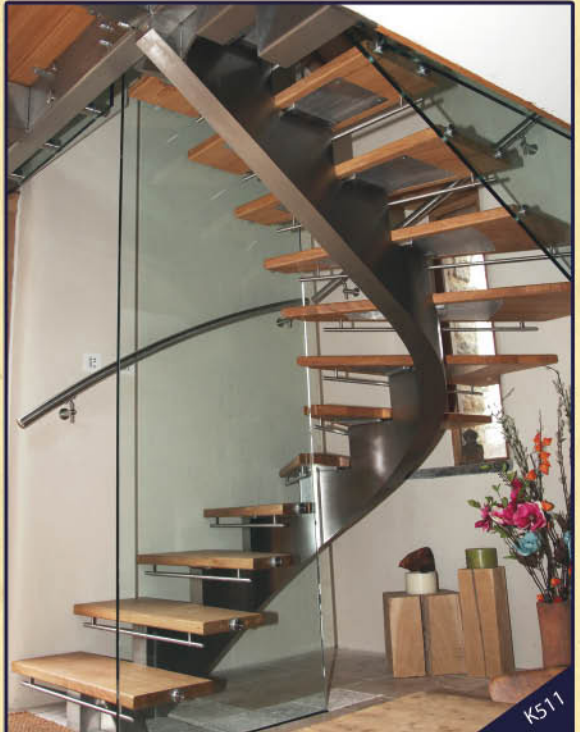

Central Spine Staircases

A staircase with a central spine is one of the ultimate statements of modern design.

Whether they are made from timber or from steel, the sweeping curves and fine lines of these staircases never fail to add that 'wow' factor to your home.

A spine serves as a great alternative to a more traditional support mechanism, it's minimal profile resulting in a much more open feel.

Timber spines are available in a range of solid hardwoods. Steel spines, are available in either brushed stainless steel, or in powder-coated steel, finished in your own choice of RAL colour.

Steel Stringer Staircases

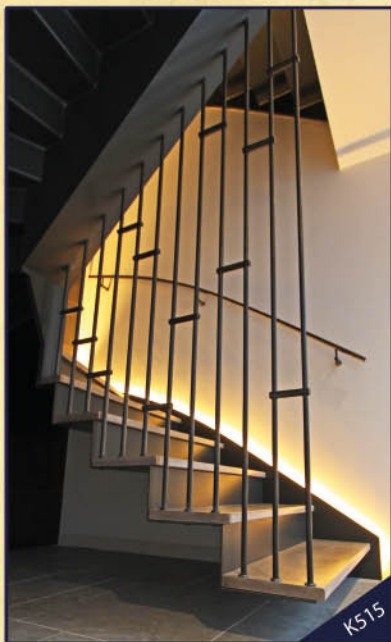

A steel stringer staircase is an ideal option when looking for a design with neat, clean lines. These contemporary staircases add a simple modern touch to your home.

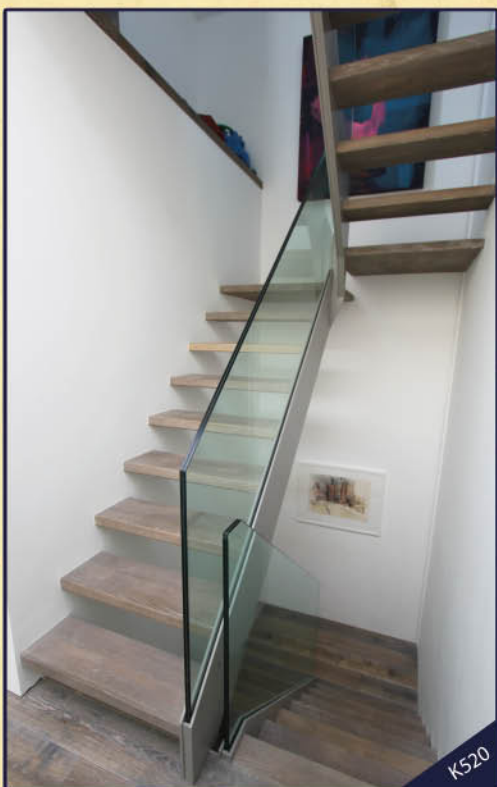

Steel stringer stairs are available in both full and cut stringer designs. In addition, they can also be 'stepped', which gives them a stylish 'zig-zag' appearance with a more lively aesthetic.

The smaller cross section of steel stringers compared to more traditional timber stringers, makes them far more slimline.

Similar to spine staircases, the stringers are available in either brushed stainless steel or, in powder-coated steel in your choice of RAL colour.

Box Stringer Staircases

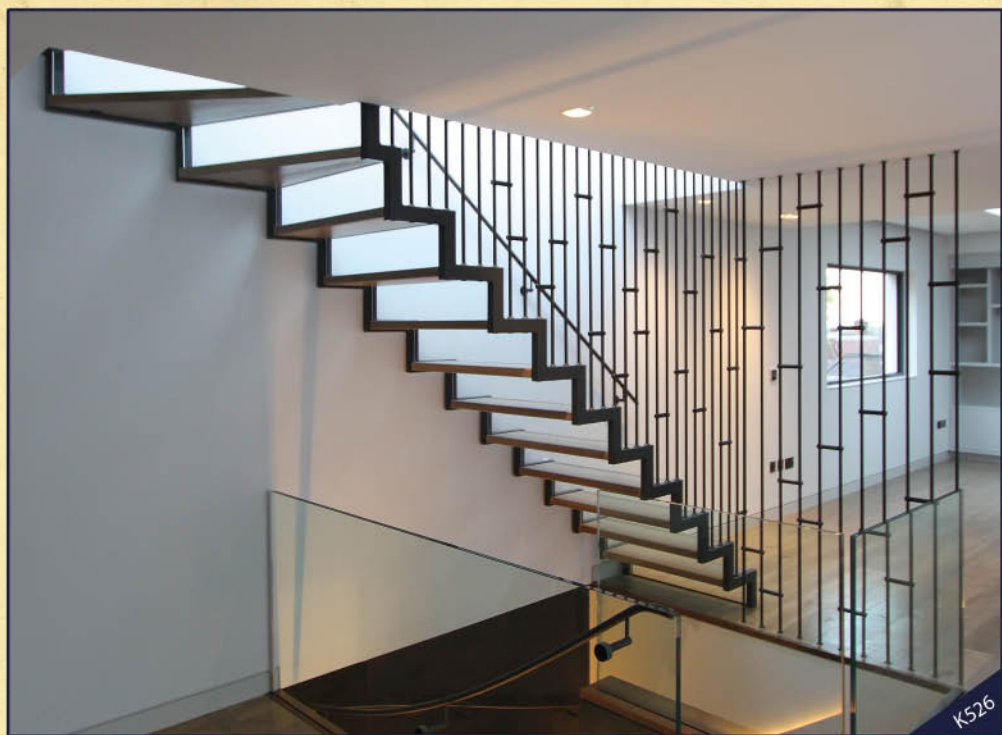

With their striking zig-zag style, box stringer staircases are a popular alternative to 'stepped' design steel stringer staircases or central spines.

The box shaped stringers give them a much smaller visual cross section than other staircase styles.

Their small cross section draws the eyes more towards the treads and balustrades, and allows for greater vision through to walls or other features beyond.

By varying details such as timber choice, balustrade style and the RAL colour of the stringers, wildly different appearances can be achieved.

They are also great for complex or unusual shapes! Here, in K525, the winding flow of the steps hugs tightly against a curving rear wall.

Timber Stringer Staircases

One of the most well known styles of staircase, timber stringer staircases are a time honoured tradition. Timber stringers can add a feeling of warmth and a natural touch to any hallway.

When combined seamlessly with modern materials and produced to a high quality factory finish these staircases can bring a great contrast of both classic and contemporary design to your stairwell.

From straight runs to tight twists and gentle curves, timber stringer staircases are extremely adaptable when it comes to shapes and features.

Available in both full and cut stringer designs, they can be modified to support a wide variety of details and aesthetic improvements, including glass risers, LED lighting, non-slip strips, bull nose steps and more.

Load-Bearing Handrails

The distinctive appearance of a load-bearing handrail staircase is created by using the strength of the heavy-duty solid timber handrail to support the treads from above.

These staircases can forgo the need for a solid stringer on the inner side, allowing the eye to flow naturally through to the wall behind, creating a sensation of space.

They can also be modified to have space saving treads, each one made for a specific foot, enabling them to fit within even the tightest of spaces.

Bolted Staircases

An increasingly popular style, bolted staircases are a beautiful and adaptable example of contemporary design.

These staircases are installed usually with a wall on one side for partial support, with the other side supported by a row of connecting bolts.

The cantilever style appearance that this creates can be achieved with almost any adjacent wall structure.

This flexible design can be combined with a huge range of additional options and details, allowing you to add your own personal touch to your staircase.

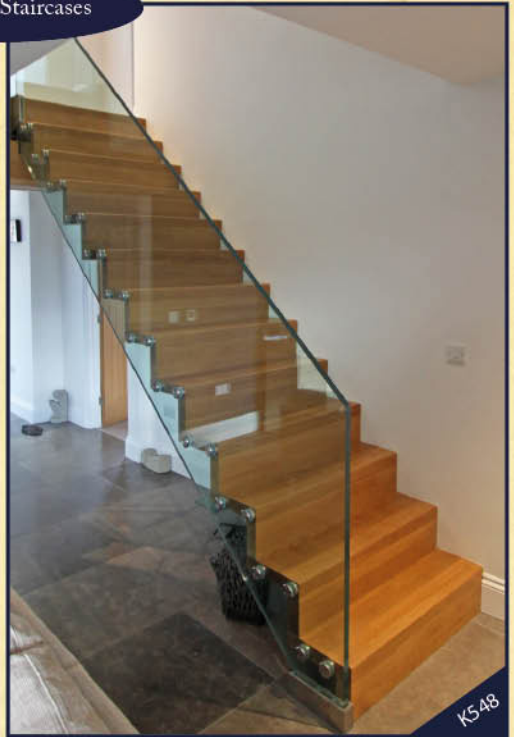

Folded Staircases

The most striking visual feature of a folded staircase is the signature 'zig-zag' appearance.

This is achieved by making the closed risers the same thickness as the solid hardwood treads. Each riser sits flush with the front of the tread above.

These staircases are often supported by load-bearing glass to help emphasise the 'zig-zag' effect, but can also be combined with a wide selection of alternative support structures and balustrades.

As well as creating an awe-inspiring focal point, the neat, geometric styling of a folded staircase works brilliantly with under-stairs storage solutions.

Glass Steps

K555

K556

One of our most spectacular specialties, glass steps are a truly glamorous statement of modernity.

Not only do they look amazing, glass steps can turn your stairway into a lightwell, allowing light to filter through to create a brighter atmosphere.

Our glass steps come with a range of non-slip finishes which includes mineral printing and lazer etched patterns.

K557

K558

Spiral Staircases

Whether they are made with traditional materials, or a more cutting-edge design with stainless steel or acrylic steps, spiral staircases are an enduring symbol of elegance.

Using a relatively small amount of floor space, they excel as either a main staircase, or as a secondary access staircase.

This makes them great for occasional access rooms like home cinemas, studies and swimming pools, and for access into basement or loft spaces.

As main staircases, spiral staircases are particularly effective when used within a large open living space. Their timeless mystique draws the eye from across the room.

Storage Solutions

At Klopping TSS Limited we are always creating new solutions and ideas to help tailor our range of bespoke staircases to your lifestyle. As the next step in this journey, we are proud to present our all new range of bespoke under-stairs storage solutions!

Available in a wide selection of hardwood finishes, our drawers can either be incorporated into an existing staircase or built into your new Unique Stairs by Klopping TSS Limited.

As with our ever expanding range of bespoke staircase solutions, our storage solutions are designed with your lifestyle and preferences in mind.

Choose from shelves, shoe racks or coat racks, or request your own concept for drawer functionality!

Our drawers use a heavy duty runner system, so they can take up to 200kg load and glide smoothly back and forth.

They also extend out the entire depth of the staircase to maximise available space, which means no more rummaging through cupboards to reach items right at the back!

For those who are ordering their new Unique Stairs, we can extend treads, risers or stringers to create additional storage such as open shelving!

To enquire, simply send us details of the sort of storage solution you are looking for!
(see back of brochure for contact details)

STAIRLIGHTS

by Klopping TSS Limited

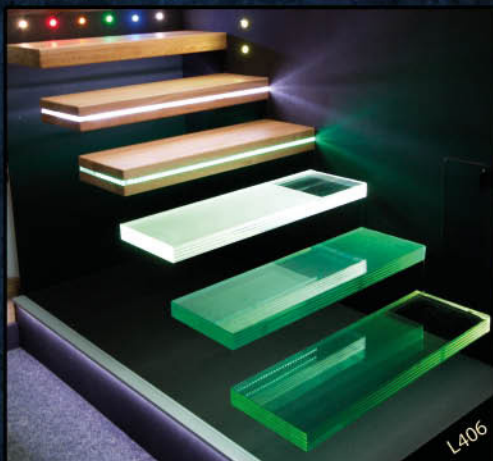

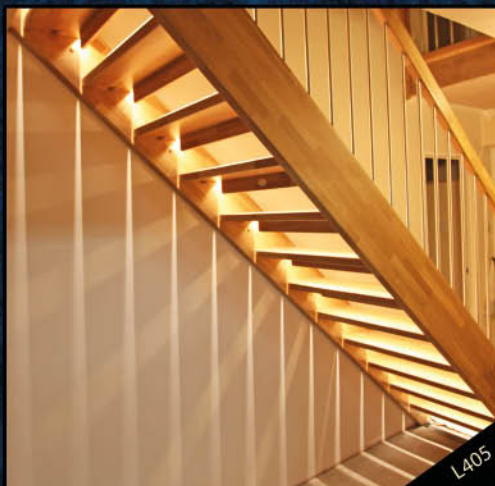

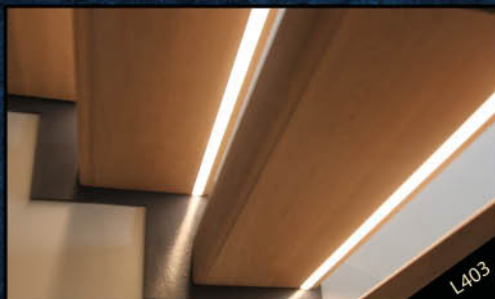

Stairlights by Klopping TSS Limited offer bespoke lighting solutions for new and existing staircases.

Featuring a wide range of LED point lights, mini spots and strips as well as RGB controlled solutions and fully integrated lighting systems, Stairlights brings out the best in your staircase.

Achieve ambient mood lighting for gentle highlights, powerful down-lighting for night time access, illuminated treads for a stunning display or just generally add a touch of style and class to your home.

Enquire now, alongside your enquiry into your new Klopping TSS Limited staircase!

Klopping TSS Limited

Your Total Staircase Solution

At Klopping TSS Limited we help you to turn your dream staircase into a reality.

Each of our truly unique feature staircases is designed, supplied and installed to meet the individual needs and lifestyles of our customers.

Engineered To Precision

Working with only the highest quality of materials and production standards, our unique stairs range uses the precision of German engineering to turn steel, glass, timber and stone into stunning focal points and ingenious solutions that are tailored to turn any house into a beautiful home.

Stairlights, our range of LED lighting solutions, can be incorporated into new and existing staircases. Illuminated treads, wall lighting, LED strip lights, and mini spots are all available to give your staircase a touch of modern flair.

Our sister company, Klopping UK's Sturdy Stairs range specialises in quality hardwood staircases for those working within a tight budget.

Putting our Customers First

We pride ourselves in our level of customer service. To each of our customers we assign a Project Manager, who will work hand in hand with each client every step of the way, providing the benefit of our years of experience.

Get In Touch!

Getting an estimate is easy. Just fill out the enquiry template provided in this brochure and send it to us via email or post. If you have site photos or drawings these would also be appreciated.

Additional copies of the enquiry template can be found on our website, where you can find further inspiration!
